

MUNEER AHMED

Junior Cybersecurity Engineer

Active Directory | Security Monitoring | Threat Detection | PKI

Genoa, Italy | munirjamali@proton.me | linkedin.com/in/muneer-jamali | github.com/imahmedmunir
| imahmedmunir.github.io/ahmedmunir

PROFILE

Cybersecurity MSc candidate (University of Genova, graduating July 2026) with hands-on experience in Active Directory attack simulation, threat detection, and PKI infrastructure. Designed and built detection systems for credential-based attacks during a thesis internship at Teoresi Group. At Ericsson, designed and deployed a Certificate Authority for microservice authentication in a production telecommunications environment. Backed by four years of Active Directory administration in a live government institution. Seeking Junior SOC Analyst, Junior Cybersecurity Engineer, or Security Analyst roles in Italy.

EXPERIENCE

Cybersecurity Analyst — MSc Thesis Internship

Genoa, Italy — July 2025 – Present

Teoresi Group

- Designed and deployed a multi-VM enterprise Active Directory lab (Windows Server 2019 DC, File Server, Windows 10/11 clients, isolated Kali Linux attacker network) to replicate realistic corporate attack conditions
- Executed and documented Active Directory attack simulations: Kerberoasting, Pass-the-Hash, ACL abuse, RDP brute force, SMB enumeration, and credential dumping; mapped all techniques to the MITRE ATT&CK framework
- Configured Sysmon across Windows endpoints and implemented Windows Event Forwarding (WEF) to centralise security event logs; established logging baselines for threat detection
- Developed Python scripts to detect authentication anomalies from Windows Security Event Logs, identifying brute-force patterns, Kerberos ticket abuse, and suspicious logon sequences
- Produced detection playbooks mapping each attack scenario to relevant Windows Event IDs, detection logic, and mitigation recommendations

Security Engineer Intern — PKI & Vulnerability Assessment

Genoa, Italy — April 2024 – December 2024

Ericsson

- Designed and implemented a Certificate Authority (CA) for secure microservice-to-microservice communication within a multinational telecommunications environment; covered PKI architecture, certificate lifecycle management, and mutual TLS configuration
- Supported vulnerability assessment and patch validation activities; documented identified risks and remediation recommendations aligned with internal security standards
- Contributed to security event analysis and incident reporting workflows alongside the SOC team
- Gained exposure to enterprise security governance, network security operations, and production-scale security processes within a large international organisation

IT Systems & Active Directory Administrator

Karachi, Pakistan — November 2019 – September 2023

High Court of Sindh

- Administered Active Directory for a government institution: user provisioning, group memberships, GPO management, and access permissions across a Windows domain environment
- Provided L1/L2 technical support for Windows workstations, network infrastructure, and internal applications; logged and tracked incidents using internal ticketing procedures

PROJECTS

Active Directory Security Monitoring Lab

Teoresi Group Thesis

Built a full enterprise AD simulation environment to develop and validate detection logic for credential-based at-

tacks. Deployed Sysmon with custom configurations, centralised event logs via Windows Event Forwarding, and developed Python-based detection scripts mapped to MITRE ATT&CK. *Architecture documented on portfolio. Source code not public due to NDA.*

Web Application Security Testing

Conducted hands-on testing of OWASP Top 10 vulnerabilities (SQL injection, XSS, authentication bypass, IDOR) using DVWA and PortSwigger Academy labs. Documented exploitation techniques and remediation approaches with Burp Suite and OWASP ZAP.

Secure Microservice CA System

Ericsson Internship

Designed and deployed a Certificate Authority enabling TLS-authenticated communication between microservices. Implemented certificate issuance, renewal, and revocation logic using Java and Spring Boot with Spring Security integration.

SKILLS

Security Monitoring	Threat Detection, Log Analysis, Windows Event Logs (WEF, Sysmon), SIEM Fundamentals, Kibana (ELK Stack), Incident Investigation
Active Directory & IAM	Active Directory, Group Policy, Kerberos, NTLM, PKI, Certificate Authority, TLS/mTLS, IAM, Identity Security
Attack Techniques	MITRE ATT&CK, Kerberoasting, Pass-the-Hash, Credential Dumping, SMB Enumeration
Security Tools	Sysmon, BloodHound, Mimikatz, Burp Suite, Nmap, Wireshark, Metasploit, OWASP ZAP, PowerShell Empire
Programming	Python (log analysis, detection scripts), PowerShell, Bash, Java / Spring Boot (foundation)
Infrastructure	Windows Server 2016/2019, Linux (Ubuntu, Kali), TCP/IP, DNS, DHCP, VMware, VirtualBox

EDUCATION

MSc — Computer Engineering (Cybersecurity & Systems)

Expected July 2026

University of Genova | Genoa, Italy

Relevant coursework: Network Security, Secure Software Development, Distributed Systems

BEng — Computer Engineering

2020

Mehran University of Engineering and Technology | Karachi, Pakistan

CERTIFICATIONS

- Junior Penetration Tester — TryHackMe
- Web Application Pentesting — TryHackMe
- Cyber Security Threat Landscape — LinkedIn Learning

LANGUAGES

English (Professional) | Italian (Intermediate — B1)
